

The sensor series **SONOFLOW CO.55/xxxSD(H) V2.0** with stainless steel housing and display – designed as clamp-on-sensors – detect the flow rate of liquids in plastic tubes of different diameters or materials within a few milliseconds.

For applications on tubes with large outer diameters the sensors **SONOFLOW CO.55/xxxSD(H) V2.0** are equipped with a handle for an optimized handling for tube insertion.

The sensors have no contact to the medium or product. With stainless steel housing they are suitable for applications in fields with strict hygienic standards. Due to the current, frequency and switching outputs industrial dosing applications can be supported. The RS-485 interface (SONOTEC protocol; Modbus® via software settings) allows bus operation of up to 12 sensors in rough industrial environments.

The **SONOFLOW CO.55/xxxSD(H) V2.0** sensors with complete built-in electronics can be installed in machines or apparatuses. The display shows the current flow rate and the measuring state.

In addition to our standard sensors, we also manufacture customer-specific solutions regarding housing materials, colors, mechanical dimensions, customized output specifications and parameter settings.

Calibration and conditions of use

Calibration	<p>Sensors are factory calibrated under the following conditions:</p> <ul style="list-style-type: none">▪ Tubing as listed and highlighted in table 'Tubing properties', not sterilized*▪ Water at 23 °C ± 2 °C▪ Warm up: at least 30 min (to compensate thermal effects)▪ Zero calibration just before measurement procedure▪ Normal pressure <p>Calibration to customer tubing, fluid, flow range, temperature, etc. on request.</p>
Media	Water or other acoustically transparent liquids
Conditions of use	<p>⚠ CAUTION:</p> <p>The sensors need to be adjusted individually to special operating conditions in case of operation with tubing not listed in the table 'Tubing properties', because the accuracy of flow measurement can be affected.</p> <p>Contact our service for details!</p> <hr/> <p>⚠ NOTE:</p> <p>Generally, the sensors are able to measure liquids in an extended operating temperature range of +1 to +50 °C, but with limited accuracy only.</p>

Accuracy depends on tubing, temperature, fluid properties and other conditions. Absolute accuracy is influenced by zero stability, resolution and zero offset effects. For details see next chapter.

* Gamma sterilization, x-ray sterilization, or autoclaving of the tubing may impact its material properties, potentially affecting sensor readings. Recalibration may be required after tubing sterilization.
