

Flaw Detection (UT)

Applications of ultrasonic testing vary, ranging from weld inspection to wall thickness measurement and the detection of discontinuities such as invisible cracks, inclusions, voids and other discontinuities in metals, plastics, ceramics and composites.

Experienced material testers have supervised the development of SONOTEC flaw detector and probes focusing on simple operation procedures and high sensitivity while simultaneously providing a robust design.

We offer a wide range of corresponding SONOSCAN probes. Select the suitable probe from our product program according to your application.

In addition to our standard products, we also manufacture **customer-specific solutions**.

Detailed Product Information

SONOSCREEN ST10

the practice orientated ultrasonic flaw detector

SONOSCAN Angle Beam Probes

for flexible use during weld inspection

SONOSCAN Straight Beam Probes

pulse echo and dual element probes

SONOSCAN Immersion Probes

for partially and fully automated testing

Applications

- Weld seam testing
- Sheet metal testing
- Wall thickness testing
- Immersion testing
